

High transfection efficiency in insect cells

InsectFect Reagent is a powerful reagent specifically designed to obtain highly efficient and reproducible transfection of insect cells. It is adapted to the delivery of all types of nucleic acids. InsectFect Reagent can be used for many applications including for the production of recombinant protein using Baculovirus expression system.

InsectFect Reagent is the ideal reagent for the transfection of insect cells. It allows delivering all types of nucleic acids in numerous insect cells.

Order Information

Prod. No.	Description	Quantity
S950500	InsectFect Reagent	500 µg
SS951000	InsectFect Reagent	1 ml
S955000	InsectFect Reagent	5x 1 ml
