

Advantages of Maximo Transfection reagent:

- high transfection rate and efficiency
- large gene expression and more transfected cells
- Lower Cytotoxicity

The Maximo-Transfection Reagent has several unique features necessary for efficient transfection - DNA condensation and endosomal release, which improves gene transfection efficiency.

Based on a cationic polymer Maximo-Transfection Reagent is extremely stable, easy to handle, and more resistant to serum in cell culture.

The above advantages make gene transfection much easier and reproducible. Maximo-Transfection Reagent is widely used for both primary cell and established cell lines.

Order Information

Prod. No.	Description	Quantity
ST9500	Maximo Transfection reagent	0.5 ml
ST510	Maximo Transfection reagent	2x 1 ml
