

Transfect Plus reagent is our latest generation of transfection reagent. It allows transfecting all types of nucleic acids with a very high efficiency. Due to its formulation, Transfect Plus reagent delivers a large quantity of nucleic acids leading to higher protein expression compared to other transfection reagents. It is fully biodegradable and does not interfere with cellular mechanisms. Consequently, high cell viability is maintained in every experiments and any potential secondary effect is avoided

Transfect Plus reagent can be used to realize any transfection applications: co-transfection, reverse transfection, high-throughput screening.

Transfect Plus reagent outperforms all other transfection reagents in efficiency and transgene expression level. In addition, an important cell viability is maintained even for sensitive cells.

## Order Information

Prod. No.	Description	Quantity
S980500	TransFect Plus Reagent	500 µg
S981000	TransFect Plus Reagent	1.0 ml
S985000	TransFect Plus Reagent	5x 1 ml
